FEATURES & BENEFITS

THOR Electrodes are coated in high-grade PTFE, making surgery faster and less disrupted. Tips come in both open and guarded options, ensuring alternate site thermal injuries are minimised when operating in limited space.

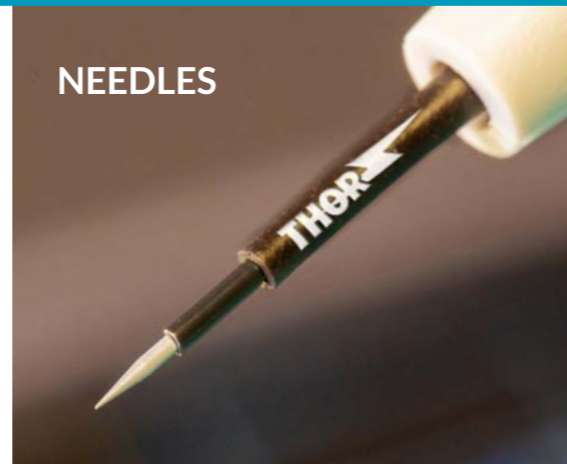

THOR needle electrodes are engineered to the highest specification, ensuring very fine tips that can be used with precision and accuracy in the most demanding of procedures. The PTFE coating enables the tip to maintain its integrity throughout the operation.

IG Surgical pencils have a slim line design that makes them ergonomic and lightweight. They have perfectly weighted Push Button control and come as standard with a THOR PTFE coated electrode.
