Lagis Veres Nadel 150 mm Art. N# **IN-150** VE 12 Stk

## Insufflation Needle

Patient safety as well as product quality and functionality has been the core focus of the design of Lagis Veress Needle.

The needle cannula is available in 120mm or 150mm length. Inside the cannula and extending beyond the sharp tip is a spring-loaded, blunt stylet. The stylet retracts as the needle is pushed through the abdominal wall and automatically slides forward once the peritoneum has been penetrated.

The luer lock with a stopcock at the end of the handle is connected to the CO<sub>2</sub> insufflation tubing for inflating the abdominal cavity.
