

ReNew™

Electrocautery Probe and Disposable Tips

Precise electrosurgical dissection and coagulation

- Disposable tips
- Satisfy surgeon preferences without adding to inventory
- Cost effective as neither re-insulation or repair of tips is required
- High-dielectric strength (PEEK* rigid shaft material)
- Patented visual indicator for electrical continuity and integrity between shaft and disposable tip
- Superior electrode insulation for safety, even at higher voltages
- Tips can be changed during procedures without voltage implications
- Ergonomically designed handle for balance and comfort
- Available in 34cm and 42cm lengths
- Eliminates need for abrasive cleaning during surgery, thereby reducing chance of insulation damage
- 1 year warranty

*PEEK is a registered trademark of Victrex, Inc.

Patented removable probe cap doubles as a flushport and luer cover

The ReNew™ Electrocautery Probe is a monopolar instrument that works with high-quality, disposable Microline Surgical tips to put greater control in the hands of the surgeon. The ergonomically designed probe offers a superior tactile experience, as well as efficient electrosurgical performance. This design provides the surgeon full control during any procedure because the electrosurgical effect is achieved only where metal is exposed.

ReNew™

Electrocautery Probe and Disposable Tips

Full Range of Disposable Tips for Precision and Performance

To minimize eschar buildup, choose from four tip configurations according to surgeon preference: Straight, J Hook, L Hook, Spatula

ReNew™ Electrocautery Tips are easily attached to the insulated shaft using an insulated threaded design to promote optimal control for the surgeon during the electrocautery use.
